

Switch to LEDs – Phasing out halogen globes.

Halogen light globes are being phased out from the Australian market.

LEDs are better value for money than incandescent and halogen light globes. LEDs use about 75% less energy than halogen light globes and last 5 to 10 times longer.

By replacing 10 halogen light globes with LEDs, an average household can expect to save around \$650 over 10 years on their electricity bill.

Our Electricians can assist you with the transition, in your own home or investment property.
